

Install .NET Core 2.1 SDK (v2.1.300) on Linux Ubuntu 16.04

Not sure where to start? See Get started with .NET in 10 minutes (/net/learn/get-started).

Linux Distribution

Register Microsoft key and feed

Before installing .NET, you'll need to register the Microsoft key, register the product repository, and install required dependencies. This only needs to be done once per machine.

Open a command prompt and run the following commands:

```
~$ wget -q packages-microsoft-prod.deb https://packages.microsoft.com/config/ubuntu/16.04/packa
```

~\$ sudo dpkg -i packages-microsoft-prod.deb

Install .NET SDK

Update the products available for installation, then install the .NET SDK.

In your command prompt, run the following commands:

```
~$ sudo apt-get install apt-transport-https
```

- ~\$ sudo apt-get update
- ~\$ sudo apt-get install dotnet-sdk-2.1

Ready to Get Started?

Our step-by-step tutorial will help you build your first app with the .NET Core SDK.

Supported on Windows, Linux, and macOS
